

Current Issue **EDITORIAL**

Dear reader,

In this issue of SET IJBE we proudly bring to you our first edition, this project required dedication and support from SET personnel, our associates and non-associates. And, to all these people, we from SET, and we believe the worldwide community working in the Broadcast Engineering field would like to show our appreciation and express our gratitude towards them. For those who are not yet fully acquainted with our mission, we would like to explain that the Brazilian Society of Television Engineering (SET) is a Technical-Scientific Association, non-profit organization, founded in 1988, conveying together professionals, academics and companies, dedicated to the engineering studies, developments, refinement of technical, operational and scientific knowledge, in the fields of Radio, Television, Telecommunications, Film and New Medias. In this 2015 Edition we've conveyed an attention-grabbing series of articles regarding Digital Television, the reason for such emphasis is to collaborate with the current Analogic Television switch off process recently started in Brazil and supplement the technology unceasing development. In addition to this, the prominent adoption of the ISDB-T standard in most South-American countries and its expansion towards African and Asian regions enhanced the reason for this choice in this issue. We hope you enjoy and take advantage of these papers and feel motivated to submit us yours in the future.

Best wishes,

SET IJBE Staff
